EXPERIMENT NO: 15 **Date: _____**

IMPLEMENTATION OF BOOK VIEW

AIM

To implement **SQL Views** for creating a virtual table from an existing table and performing operations on the view.

OBJECTIVES

1. Create a **BOOK** table with fields: **BOOK_NO, NAME, AUTHOR, PUBLISHER,** and **PRICE**.
2. Insert sample records into the BOOK table.
3. Create a view named **BOOK_VIEW** containing books whose price is greater than **300**.
4. Update the publisher of a book through the view.
5. Display the contents of the view after the update.
6. Verify that changes made through the view are reflected in the base table.

PROGRAM

1. Create BOOK Table

```
CREATE TABLE BOOK (
    BOOK_NO INT PRIMARY KEY,
    NAME VARCHAR(50),
    AUTHOR VARCHAR(50),
    PUBLISHER VARCHAR(50),
    PRICE DECIMAL(8,2)
);
```

2. Insert Records into BOOK

```
INSERT INTO BOOK VALUES (101,'Database System Concepts','Silberschatz','McGraw
Hill',450);
INSERT INTO BOOK VALUES (102,'Operating Systems','Galvin','Wiley',550);
INSERT INTO BOOK VALUES (103,'Computer Networks','Tanenbaum','Pearson',280);
INSERT INTO BOOK VALUES (104,'Python Programming','Reema Thareja','Oxford',350);
INSERT INTO BOOK VALUES (105,'Data Structures','Seymour Lipschutz','McGraw
Hill',250);
```

3. Create BOOK_VIEW

```
CREATE VIEW BOOK_VIEW AS
SELECT BOOK_NO, NAME, PUBLISHER
FROM BOOK
WHERE PRICE > 300;
```

4. Update Publisher through the View

```
UPDATE BOOK_VIEW
SET PUBLISHER='ABC'
WHERE BOOK_NO=101;
```

5. Display the View

```
SELECT * FROM BOOK_VIEW;
```

6. Verify the Update in the Base Table

```
SELECT BOOK_NO, NAME, PUBLISHER
FROM BOOK
WHERE BOOK_NO=101;
```

OUTPUT

1. Table Creation

```
Table BOOK created.
```

2. Record Insertion

```
1 row inserted.
1 row inserted.
1 row inserted.
1 row inserted.
1 row inserted.
```

3. View Creation

```
View created.
```

4. View Updated

```
1 row updated.
```

5. Display BOOK_VIEW

```
+---------+--------------------------+------------+
| BOOK_NO | NAME                     | PUBLISHER  |
+---------+--------------------------+------------+
| 101     | Database System Concepts | ABC        |
| 102     | Operating Systems        | Wiley      |
| 104     | Python Programming       | Oxford     |
+---------+--------------------------+------------+
```

6. Verification from Base Table

```
+---------+--------------------------+------------+
| BOOK_NO | NAME                     | PUBLISHER  |
+---------+--------------------------+------------+
| 101     | Database System Concepts | ABC        |
+---------+--------------------------+------------+
```

RESULT

The **BOOK_VIEW** was created successfully using the **CREATE VIEW** statement. The view was queried and updated successfully, and the modification made through the view was reflected in the underlying **BOOK** table.
