EXPERIMENT NO: 16 **Date: _____**

IMPLEMENTATION OF STORED PROCEDURE

AIM

To implement a **Stored Procedure** in PL/SQL for updating records in a database table using parameters.

OBJECTIVES

1. Create a **BOOK** table with fields: **ISBN, BOOK_NAME, AUTHOR, PUBLISHER,** and **PRICE**.
2. Insert sample records into the BOOK table.
3. Create a stored procedure named **UPDATE_BOOK_PRICE** to update the price of a book using its ISBN.
4. Execute the stored procedure with appropriate parameter values.
5. Verify that the book price has been updated successfully.

PROGRAM

1. Create BOOK Table

```
CREATE TABLE BOOK (
    ISBN VARCHAR2(20) PRIMARY KEY,
    BOOK_NAME VARCHAR2(50),
    AUTHOR VARCHAR2(50),
    PUBLISHER VARCHAR2(50),
    PRICE NUMBER(8,2)
);
```

2. Insert Sample Records

```
INSERT INTO BOOK VALUES ('ISBN101','Database Management
System','Silberschatz','McGraw Hill',650);
INSERT INTO BOOK VALUES ('ISBN102','Operating Systems','Galvin','Wiley',550);
INSERT INTO BOOK VALUES ('ISBN103','Computer Networks','Tanenbaum','Pearson',480);
INSERT INTO BOOK VALUES ('ISBN104','Python Programming','Reema
Thareja','Oxford',420);
INSERT INTO BOOK VALUES ('ISBN105','Data Structures','Seymour Lipschutz','McGraw
Hill',390);
```

3. Create Stored Procedure

```
CREATE OR REPLACE PROCEDURE UPDATE_BOOK_PRICE
(
    P_ISBN  IN VARCHAR2,
    P_PRICE IN NUMBER
)
AS
BEGIN
    UPDATE BOOK
    SET PRICE = P_PRICE
    WHERE ISBN = P_ISBN;
END;
/
```

4. Execute the Stored Procedure

```
EXEC UPDATE_BOOK_PRICE('ISBN101',700);
```

5. Verify the Updated Record

```
SELECT ISBN, BOOK_NAME, PRICE
FROM BOOK
WHERE ISBN='ISBN101';
```

OUTPUT

1. Table Creation

```
Table BOOK created.
```

2. Record Insertion

```
1 row inserted.
1 row inserted.
1 row inserted.
1 row inserted.
1 row inserted.
```

3. Procedure Creation

```
Procedure created.
```

4. Procedure Execution

```
PL/SQL procedure successfully completed.
```

5. Verification of Updated Record

```
+---------+---------------------------+--------+
| ISBN    | BOOK_NAME                 | PRICE  |
+---------+---------------------------+--------+
| ISBN101 | Database Management System | 700.00 |
+---------+---------------------------+--------+
```

RESULT

The stored procedure **UPDATE_BOOK_PRICE** was created and executed successfully. The price of the specified book was updated using its ISBN, and the changes were verified by querying the **BOOK** table.
