EXPERIMENT NO: 17 **Date: _____**

IMPLEMENTATION OF STORED FUNCTION

AIM

To implement a **Stored Function** in PL/SQL to perform calculations and return computed values.

OBJECTIVES

1. Create an **EMPLOYEE** table with fields: **EMP_NO, EMP_NAME, DEPARTMENT,** and **SALARY**.
2. Insert sample employee records into the table.
3. Create a stored function named **HRA()** to calculate the House Rent Allowance (HRA) based on salary.
4. Execute the function within a **SELECT** statement.
5. Display the employee details along with the calculated HRA.

PROGRAM

1. Create EMPLOYEE Table

```
CREATE TABLE EMPLOYEE (
    EMP_NO NUMBER PRIMARY KEY,
    EMP_NAME VARCHAR2(50),
    DEPARTMENT VARCHAR2(30),
    SALARY NUMBER(8,2)
);
```

2. Insert Sample Records

```
INSERT INTO EMPLOYEE VALUES (101,'Arjun Das','Accounts',55000);
INSERT INTO EMPLOYEE VALUES (102,'Meera Nair','HR',42000);
INSERT INTO EMPLOYEE VALUES (103,'Rahul Ravi','Sales',28000);
INSERT INTO EMPLOYEE VALUES (104,'Sara John','Finance',65000);
INSERT INTO EMPLOYEE VALUES (105,'Anu Thomas','IT',35000);
```

3. Create Stored Function

```
CREATE OR REPLACE FUNCTION HRA
(
    SAL IN NUMBER
)
RETURN NUMBER
AS
    H NUMBER;
BEGIN
    IF SAL >= 50000 THEN
        H := SAL * 0.20;
    ELSIF SAL >= 30000 THEN
        H := SAL * 0.15;
    ELSE
        H := SAL * 0.10;
    END IF;

    RETURN H;
END;
/
```

4. Execute the Function

```
SELECT EMP_NO,
       EMP_NAME,
       SALARY,
       HRA(SALARY) AS HRA_AMOUNT
FROM EMPLOYEE;
```

OUTPUT

1. Table Creation

```
Table EMPLOYEE created.
```

2. Record Insertion

```
1 row inserted.
1 row inserted.
1 row inserted.
1 row inserted.
1 row inserted.
```

3. Function Creation

```
Function created.
```

4. Function Execution

```
+--------+-------------+----------+------------+
| EMP_NO | EMP_NAME    | SALARY   | HRA_AMOUNT |
+--------+-------------+----------+------------+
| 101    | Arjun Das   | 55000.00 | 11000.00   |
| 102    | Meera Nair  | 42000.00 |  6300.00   |
| 103    | Rahul Ravi  | 28000.00 |  2800.00   |
| 104    | Sara John   | 65000.00 | 13000.00   |
| 105    | Anu Thomas  | 35000.00 |  5250.00   |
+--------+-------------+----------+------------+
```

RESULT

The stored function **HRA()** was created and executed successfully. The function correctly calculated the **House Rent Allowance (HRA)** for each employee based on salary and returned the computed values in the query result.
