Experiment No.: 7

Title

Cloud-Based Collaboration Using Google Docs and Google Sheets

Aim

To understand cloud-based collaboration using real-time editing features in Google Docs and Google Sheets and to explore version history management.

Requirements

- Computer with internet connectivity
- Web browser
- Google account
- Google Docs and Google Sheets

Procedure

Part A: Google Docs

1. Open Google Docs and create a new document.
2. Enter and format a short report on cloud-based collaboration.
3. Share the document with group members and assign appropriate access permissions.
4. Edit the document simultaneously with another member.
5. Add a comment and use Suggesting mode to propose an edit.
6. Open version history and examine earlier versions.
7. Make a temporary change and restore an earlier version.

Part B: Google Sheets

1. Open Google Sheets and create a spreadsheet to track project tasks.
2. Enter task descriptions, assigned members, status, and estimated hours.
3. Share the spreadsheet with group members.
4. Update the data collaboratively.
5. Use `=SUM(E2:E5)` to calculate total hours.
6. Use `=COUNTIF(D2:D5,"Completed")` to count completed tasks.
7. Add a cell comment and examine version history.
8. Change a value temporarily, restore an earlier version, and verify the result.

Output / Observations

1. Paste a screenshot showing the shared Google Docs document.
2. Paste a screenshot showing the Google Sheets task tracker and calculated results.

3. Record whether simultaneous editing was observed.
4. Record whether comments and version history were accessed successfully.
5. Record whether the original content was recovered after restoration.

Result

Successfully created and shared documents and spreadsheets, demonstrated real-time collaboration, used feedback features, and explored version history management.

Title

Creating AI-Assisted Presentation Slides Using Gamma

Aim

To create an AI-assisted presentation using Gamma by preparing a prompt, generating slides, reviewing and editing the content, and exporting or sharing the final presentation.

Requirements

- Computer with internet connection and web browser
- Gamma account
- Approved presentation topic

Procedure

1. Open https://gamma.app and sign in.
2. Start a new AI-assisted presentation using the available creation option.
3. Enter a prompt specifying the topic, audience, purpose, slide count, structure, and visual style.
4. Review the generated outline and make corrections if necessary.
5. Generate the slides and inspect the content and slide sequence.
6. Edit unclear text, remove repetition, and improve slide organization.
7. Review visual relevance, layout consistency, and readability.

8. Verify factual claims and references using reliable sources.
9. Preview the completed presentation.
10. Export the presentation in an available format or share it using an approved method.

Output / Observations

- Attach a screenshot of the prompt or generated presentation.
- Attach a screenshot showing the final slide deck or selected edited slides.
- Record the number of slides generated: _____
- Record the export format or sharing method used: _____
- Mention one improvement made after reviewing the AI-generated content: _____

Result

Successfully created and reviewed an AI-assisted presentation using Gamma and shared or exported the final presentation.
